Sopra Steria is positioned as a Leader in the 2024 SPARK MatrixTM for Cloud-Native Application Development Services by Quadrant Knowledge Solutions

- The [Quadrant Knowledge Solutions](#) SPARK Matrix™ provides competitive analysis & ranking of the Cloud-Native Application Development Services (CNADS) vendors.
- Sopra Steria, with its comprehensive technology for Cloud-Native Application Development Services, has received strong ratings across the parameters of technology excellence and customer impact.

Paris, April 24, 2024: Sopra Steria and Quadrant Knowledge Solutions announced today that Sopra Steria has been named as a leader in the Q1 2024 SPARK Matrix™ analysis of the global CNADS market.

The Quadrant Knowledge Solutions' SPARK Matrix™: Cloud-Native Application Development Services, includes a detailed analysis of global market dynamics, major trends, vendor landscape, and competitive positioning. The study provides competitive analysis and ranking of the leading technology vendors in the form of its SPARK Matrix™. The study offers strategic information for users to evaluate different provider capabilities, competitive differentiation, and market position.

According to Sitaparna Roy, Analyst at Quadrant Knowledge Solutions, "Sopra Steria through its Modern Apps Development Services helps organizations to convert their ideas into Minimum Viable Product (MVP) and monitor all the development stages to production with unparalleled speed, efficiency, and productivity. It facilitates this by offering Enterprise Architect Services, Low- code/ No-code services and Cloud-Native Application development Services in its Modern Apps Development Services portfolio. Sopra Steria amalgamates application, data, infrastructure, and security proficiencies, along with industrialized assets, to cater to diverse cloud environments, be it private, public, hybrid, or sovereign. Sopra Steria differentiates itself through DigiLabs spread across the world. These DigiLabs support collaboration between customers and Sopra Steria's team and demonstrate technologies and real-life use cases, applicable for various use cases. It supports innovation through adoption of the latest technologies and tools for generating new ideas for products, services, and tools. Sopra Steria's unique 'BizDevSecOps' approach for end-to-end digital transformation supports effective communication and collaboration between businesses and team operations throughout the software development life cycle."

"Sopra Steria's continued focus on catering to a wide scale of use cases across multiple industry verticals, providing highly scalable technology solutions, comprehensive roadmap & vision, and service offerings and innovation in terms of improved center of excellence and quick adoption to latest technologies, has resulted in Sopra Steria receiving strong ratings across service excellence and customer impact and has been positioned as a leader for the third consecutive year in the SPARK Matrix: Cloud Native Application Development Services, 2024." Sitaparna adds.

"Sopra Steria is proud to be recognized once again as a leader in Cloud-Native Application Development Services by Quadrant Knowledge Solutions. Our commitment to innovation, customer-centricity, and excellence in service delivery has enabled us to maintain this position for the third consecutive year. We believe that our comprehensive approach to modern application development, supported by our Cloud Center of Excellence and Ingine

Platform, empowers organizations to achieve their digital transformation goals efficiently and effectively.", comments Yann Gloriau, Cloud expert at Sopra Steria.

Quadrant Knowledge Solutions defines CNADS as "the services that consist of solutions and methodologies for creating, deploying, and managing applications that are cloud-native, agile, low cost, and highly scalable while prioritizing security measures and compliance. These services leverage technologies such as containers and microservices to provide scalability and security throughout the software development lifecycle (SDLC) and integrate DevOps practices to automate processes and reduce time-to-market, and scalability ensuring applications can efficiently handle varying workloads. These services enhance software development and deployment cycles, deployment frequency, and the quality and relevance of software releases to enable better alignment with business objectives. Thus, organizations attain effective legacy modernization, operational efficiency, superior customer experience, scalability, and flexibility which are necessary for adapting to evolving changes across multi-cloud environments in the cloud-native market."

Traditionally, applications were developed through monolithic approach in which they were created in a rigid technology stack that limited the scope of upgradation, scalability, integrations, and development agility. This resulted in longer development cycles and difficulty in adapting to the changing business needs. The cloud-native approach to application development introduces flexibility for the developers to select, replace, upgrade, and remove different elements of an application individually. This ensures the creation of adaptable applications that can be upgraded according to the business requirements. The shift to cloud-native development not only enhances productivity, but also ensures that developers can dedicate their efforts to innovation rather than operational intricacies.
